

SCREEN RULES

2026-2027

01.

Screen limitation

Each child has one screen time limit per day. They can choose between 45 minutes of use in the computer room, 30 minutes of solo screen time in CyberClub, or 30 minutes of play on PlayStation.

02.

Screen purpose

It is permitted to use personal phones in the club when it is used as part of social gatherings and interaction with other children. If a child wishes to socialise with their telephone, this can be done in the CyberClub, where a time must be booked.

03.

Other screens

If children bring their own computers, iPads or other types of screens that are not phones, these may only be used in CyberClub. We do not allow the use of school computers, as neither parents nor the club are responsible for the security or content on these devices.

04.

Club users

We use our own club users on the different gaming platforms we have. It is also possible for children to log in with their own users if they wish. In that case, it is the child's own responsibility to log out again, with continuous reminders and help from adults.

05.

Age restrictions

We use games that we consider to be suitable for our target group and support the children's well-being, community and development. If in special cases we use games that are significantly above the recommended age limit, we ask for separate permission from home and close the door to the computer room.

SCREEN RECOMMENDATIONS 2026-2027

01.

Devices from home

We ensure secure user profiles, age-appropriate platforms and educational content on the screens we provide. Therefore, we recommend that children do not bring their own devices to the club, as much as possible.

02.

Security and apps

We always help children with the digital dilemmas and questions they encounter in everyday life. However, we do not have the ability to control settings on children's own devices. Therefore, we recommend that only age-appropriate apps are downloaded to children's devices.

03.

Time limit or monitoring

We allow the use of personal phones for social use. If you as a parent want to limit the amount of screen time on your own devices, we recommend using screen restrictions or parental controls.

04.

Screen-free and analog communities

We work with digital education in close collaboration with analog communities. Therefore, we recommend that you support and motivate your child to participate in our many analog activities as well as our monthly screen-free days.

05.

Contact and dialogue

It is always easier to support a child's well-being when all the adults are on the same wavelength. That is why we always contact you if we want to share experiences or observations, and we also hope that you will contact us with questions or other matters.
